

## How to Use Firefox and Chrome to Open MHT file

This document shows user how to use Firefox and Chrome browser in order to view Online Training Material's MHT pages at GVD web site.

## Mozilla Firefox

When using Firefox to open a .mht webpage, it will look as follow:

In order to view the .mht webpage correctly, user needs to download add-ons and install it in Firefox. Go to <a href="https://addons.mozilla.org/en-US/firefox/">https://addons.mozilla.org/en-US/firefox/</a> page, and find the search bar in the upper right corner, and key in "unmht" to search this add-ons.

The UnMHT add-ons is the tool which allows you to view MHT (MHTML) web archive format files, and save complete web pages, including text and graphics into a single MHT file. To install this add-on, follow the steps below:

Click + Add to Firefox and click Install Now in the popup dialog. After the installation completed, restart the Firefox browser in order to take effect.

Now, Firefox can open .mht webpages correctly.

## Add Camera Manually

To add a channel manually, see the following steps: (Illustrated by the Arecont 3130 model)

## Google Chrome

Google Chrome does not support MHT webpages as well, thus when opening a MHT webpage it will look as follow:

```
GVDigital.Inc

www.gvdigital.com/gvddoc/Online%20Training/03.%20Add%20Camera%20Manually/Add%20Camera%20Manually.mht

MIME-Version: 1.0

```

Just like Firefox, Google Chrome has its own extensions and can be free downloaded. Go to <a href="https://chrome.google.com/webstore/category/home">https://chrome.google.com/webstore/category/home</a> and key in **ietab** in the search bar. The search result for "ietab" appears, click **+ ADD TO CHROME** button to install it.

As Confirm New Extension dialog popup, click the Add button.

When the installation is completed, user can see a new button with small IE picture in upper right corner of the Chrome browser.

Open the .mht webpage again and the result is the same but this time click the IETAB icon as shown below.

The page will now turn into IE-based webpage, so we can open mht webpages correctly in Google Chrome.
